COSMETIC INJECTABLES

Reduce the appearance of wrinkles and restore facial volume with cosmetic injectables.

Cosmetic injection treatments are quick fixes for erasing lines and wrinkles of all types — from early fine lines to deeper folds. These procedures help to augment thin lips, flat cheeks, weak chins, create angles, add lost volume, and help with excessive sweating.

Facial injections help to enhance your skin's youthful appearance and reduce smile lines. So, if you are concerned that fine lines and wrinkles are detracting from the radiance of your smile, at Esteem Clinic, we offer patients a minimally invasive treatment to improve your skin's look and feel.

We provide an extensive range of cosmetic injections to meet the specific needs of our clients including wrinkle free injections, non-surgical rhinoplasty, excessive sweating, fat dissolving injections, dermal fillers and more.

E

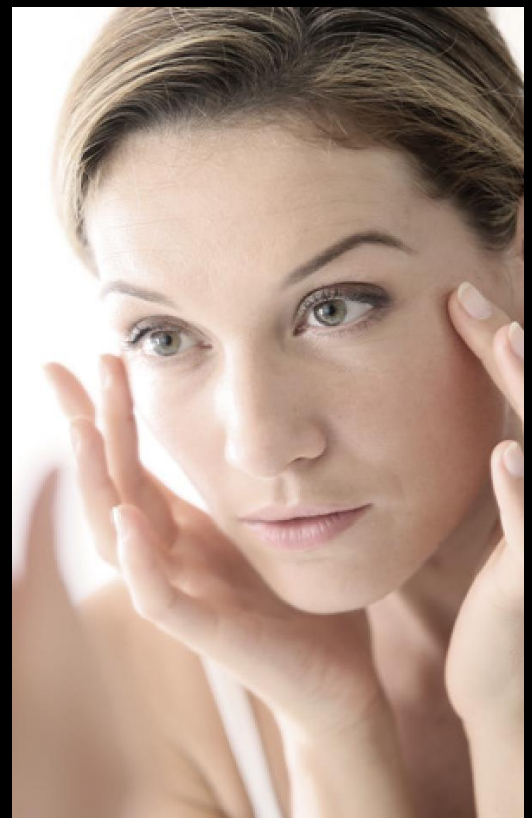

WRINKLE FREE INJECTIONS

Repeated facial movements etch lines into the skin like paper that has been folded over and over.

When we are young, the skin bounces back into place. But as collagen and elastin decline over time, the lines remain and become deeper.

Modern anti-ageing treatments like wrinkle injections were developed to minimize the amount of facial muscle movement, thereby preventing wrinkle formation for skin that looks youthful and refreshed.

Even for those clients with minimal static lines, anti-wrinkle injections can be used as a preventative measure to reduce the likelihood of lines forming in the years to come.

NON-SURGICAL RHINOPLASTY

The Non-Surgical Rhinoplasty (aka Nose Job) is a relatively straightforward, minimal downtime technique, to change the shape of your nose with a few injections of a filler. The procedure is performed under local anaesthetic and takes approximately 15 minutes. The results are visible instantly. Many clients can return to work or social activities straight away with minimal discomfort, mild swelling, and minor bruising.

EXCESSIVE SWEATING HYPERHIDROSIS

Widely affected, many people do not know that injections can be used as a therapeutic option to reduce excessive sweating, working by temporarily blocking the nerves that stimulate glands to produce and secrete sweat. At Esteem Clinic, we offer treatment for hyperhidrosis to our clients using muscle relaxant injections.

DERMAL FILLERS

Dermal fillers are substances designed to be injected beneath the surface of the skin to add volume and fullness. They are typically used in the cheeks, lips and under the eyes, however, can be used in many other areas of the face too.

Most dermal fillers contain hyaluronic acid, a natural compound that aids in the production of collagen and elastin.

Esteem Clinic use a variety of dermal fillers available, to treat specific areas and to address a client's specific goals.

TEAR TROUGH INJECTIONS

A tear trough is an ageing deformity at the connection between the cheek and lower eyelid. Through the ageing process, hollows form which create dark shadows under our eyes that make us look tired, highlighting these dark circles under our lower eyelids.

With the use of dermal fillers, we can fill out the tear trough space and add volume in the upper area of the cheek and eyelid to rejuvenate and restore a youthful look.

V2 BEAUTY BOOSTER

There is a revolutionary new treatment for rejuvenating dry, dull skin affected by fine lines and wrinkles. The V2 Beauty Booster treatment is a TGA approved, game-changing advancement in aesthetics, revolutionizing the way therapists can treat their client's skin to give them a glowing complexion and naturally hydrating the skin from within. The treatment uses multi-needle injection to inject hyaluronic acid under the surface of the skin in a fast and efficient manner.

FAT DISSOLVING INJECTIONS

Our Fat Dissolving injections are a long-term solution to eliminating stubborn fat cells found under the chin (submental fat) that do not respond to diet and exercise.

The treatment contains deoxycholic acid. This substance breaks down and absorbs the fat found in the food that we eat.

When the deoxycholic acid is injected into the treatment area (under the chin), it dissolves and eliminates the fat cells within that area, thereby removing the dreaded "double-chin". Once fat cells are removed from the body, they can no longer store fat thus minimising the number of fat tissues in the treated area.
